### **Abstract:**

In the modern digital era, artificial intelligence (AI) technologies are increasingly being integrated into educational processes, including language learning. Economic English is an important component for students, researchers, and professionals working in the fields of economics, business, and international trade. This article explores the opportunities of learning Economic English using artificial intelligence tools. The study analyzes how AI-based platforms improve vocabulary acquisition, reading comprehension, translation accuracy, and communication skills related to economic terminology. The research also discusses the advantages and limitations of using AI tools in teaching Economic English. The results show that artificial intelligence significantly enhances learning efficiency, provides personalized learning environments, and supports independent study for learners of Economic English.

### **Annotatsiya:**

Zamonaviy raqamli davrda sun'iy intellekt (AI) texnologiyalari ta'lim jarayonlariga, jumladan, xorijiy tillarni o'rganishga tobora keng joriy etilmoqda. Iqtisodiy ingliz tili

iqtisodiyot, biznes va xalqaro savdo sohasida faoliyat yuritayotgan talabalar, tadqiqotchilar hamda mutaxassislar uchun muhim hisoblanadi. Mazkur maqolada sun'iy intellekt vositalari yordamida iqtisodiy ingliz tilini o'rganish imkoniyatlari tahlil qilinadi. Tadqiqot davomida SI asosidagi platformalar iqtisodiy terminologiyani o'zlashtirish, matnlarni tushunish, tarjima aniqligini oshirish hamda muloqot ko'nikmalarini rivojlantirishdagi roli o'rganildi. Shuningdek, iqtisodiy ingliz tilini o'qitishda sun'iy intellektdan foydalanishning afzalliklari va ayrim cheklovlari ham muhokama qilinadi. Tadqiqot natijalari sun'iy intellekt ta'lim samaradorligini oshirishi, shaxsiylashtirilgan o'quv muhitini yaratishi hamda talabalarning mustaqil ta'lim olishini qo'llab-quvvatlashini ko'rsatdi.

**Kalit so'zlar:**

**Аннотация:**

В современную цифровую эпоху технологии искусственного интеллекта (ИИ) все активнее интегрируются в образовательные процессы, включая изучение иностранных языков. Экономический английский язык является важным компонентом для студентов, исследователей и специалистов, работающих в сфере экономики, бизнеса и международной торговли. В данной статье рассматриваются возможности изучения экономического английского языка с использованием инструментов искусственного интеллекта. В исследовании анализируется, каким образом платформы на основе ИИ способствуют расширению словарного запаса, улучшению понимания текстов, повышению точности перевода и развитию коммуникативных навыков, связанных с экономической терминологией. Также обсуждаются преимущества и ограничения использования инструментов искусственного интеллекта в преподавании

экономического английского языка. Результаты исследования показывают, что искусственный интеллект значительно повышает эффективность обучения, обеспечивает персонализированную образовательную среду и поддерживает самостоятельное обучение студентов.

**Ключевые слова:**

искусственный интеллект, экономический английский язык, цифровое обучение, языковое образование, AI-инструменты, образовательные технологии, экономическая терминология

**Introduction**

English has become the dominant language in international economics, finance, and global business communication. As globalization continues to expand, the need for learning Economic English has become increasingly important for students and professionals in the field of economics. Economic English includes specialized terminology related to finance, trade, banking, and economic policy.

Traditional methods of teaching Economic English often rely on textbooks and classroom lectures. However, these methods may not always provide sufficient interaction or personalized learning opportunities. In recent years, artificial intelligence technologies have introduced innovative approaches to language learning.

Artificial intelligence tools such as intelligent chatbots, automated translators, and adaptive learning systems allow learners to practice Economic English in interactive and personalized ways. These technologies can analyze learners' progress, provide instant feedback, and adapt learning materials to individual needs. Therefore, the integration of artificial intelligence into language education creates new opportunities for improving Economic English learning outcomes.

The purpose of this study is to analyze the opportunities and effectiveness of using artificial intelligence tools in learning Economic English.

## **Materials and Methods**

This research uses qualitative and analytical research methods to examine the role of artificial intelligence in learning Economic English.

The materials used in the research include academic publications, digital educational platforms, and artificial intelligence-based language learning tools. Several AI-powered educational resources were analyzed to determine their effectiveness in improving economic vocabulary, translation accuracy, and comprehension skills.

The research methodology includes comparative analysis, literature review, and observation of digital learning platforms that incorporate AI technologies. These methods allow the identification of advantages and challenges associated with AI-based language learning systems.

## **Results and Discussions**

The research findings indicate that artificial intelligence tools offer several significant opportunities for learning Economic English.

First, AI-powered applications provide personalized learning experiences. These systems analyze learners' performance and adjust exercises according to their skill level. As a result, learners can improve their economic vocabulary and grammar more effectively.

Second, AI tools enhance translation and comprehension of economic texts. Automated translation systems help learners understand complex economic terminology and international economic documents.

Third, artificial intelligence improves speaking and writing skills. Chatbots and conversational AI platforms enable learners to simulate real-life economic discussions and professional communication.

Furthermore, AI technologies support independent and flexible learning. Students can access learning materials anytime and anywhere, which increases motivation and learning efficiency.

However, despite these advantages, some limitations also exist. AI tools may sometimes produce inaccurate translations or lack deep contextual understanding of complex economic concepts. Therefore, human supervision and teacher guidance remain important in the learning process.

### **Conclusion**

Artificial intelligence technologies create significant opportunities for improving the learning process of Economic English. AI-based tools provide personalized learning environments, enhance vocabulary acquisition, and improve communication skills related to economic terminology.

The integration of artificial intelligence into language education supports more effective and flexible learning methods. However, AI technologies should be used as supportive tools rather than replacements for teachers.

Future research should focus on developing more advanced AI systems that better understand economic contexts and provide more accurate language assistance for learners of Economic English.
